IBMI Function

IBMI is a set of healthy self management apps for body mass index. This body mass index calculator is based on the standard BMI measurement that takes your weight and height and basically tells you if you have an unhealthy body weight. The body mass index (BMI) calculator bellow will figure out your body mass index category (underweight, normal weight, overweight, or obesity).

KUO YUE always persists in giving consideration to both technology innovation and quality. The software can have inexhaustible innovation and creation; therefore, it's enchanting. The recent technology develops in order to meet the user's needs. The renovation of the consumer software is one good example.

- [Google App](#)

Features :

- System develop based on android 4.1 or later.
- Easy-to-use.
- The body mass index formula takes several variables like height, weigh to calculate your BMI level.

IBMI Function

The image shows a mobile application interface for calculating BMI. At the top, there is a status bar with icons for home, warning, Wi-Fi, cellular signal, and battery (20%), along with the time 09:20. Below the status bar is a navigation bar with 'Home' on the left and 'Calculat' on the right. The main content area has a 'Unit:' label with two radio buttons: 'Imperial' (selected) and 'Metric'. Below this are input fields for 'Your Height:' with sub-fields for 'feet' and 'inches', and 'Your Weight:' with a sub-field for 'pounds'.

Your BMI

4 Numerical

ranges to measure

Level

Underweight <18.5

-

Normal weight =18.5~24.9

-

Overweight =25~29.9

-

Obesity >=30
