iHypertension361 Function v1.6.8

The iHypertension361 is a blood pressure log application that allows you to enter your daily blood pressure into an iPad. It follows the guidance in JNC7 Report to run the statistics of the systolic and diastolic occurrences during different periods for your cardiologist's drug prescription. In addition, you can also record any notes about how you are feeling or other important information. KUTECH always persists in giving consideration to both technology innovation and quality.

The software can have inexhaustible innovation and creation; therefore, it's enchanting. The recent technology develops in order to meet the user's needs. The renovation of the consumer software is one good example.
